

Fully Automatic Clean Room Air Lock

Application

Our clean room air lock has integral conveyors, sealed vertical sliding doors.

When a product, bin or bag is placed on the feed conveyor inside the clean room it is automatically conveyed up to the first lift-up door, it stops and waits until the outer airlock door is shut, the inner door then opens and the item is conveyed into the airlock where it waits for the inner door to shut, the outer door then opens and the item is conveyed to the outside factory area.

Medical kits exiting the airlock - under test in our factory.
