

Semi-Automatic Pallet Conveyor System

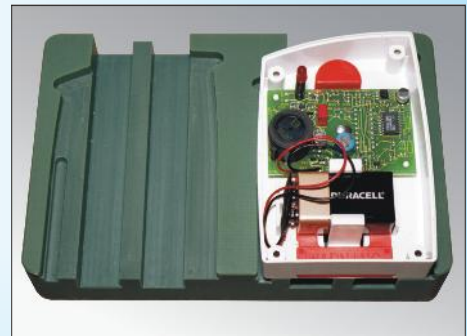

Application

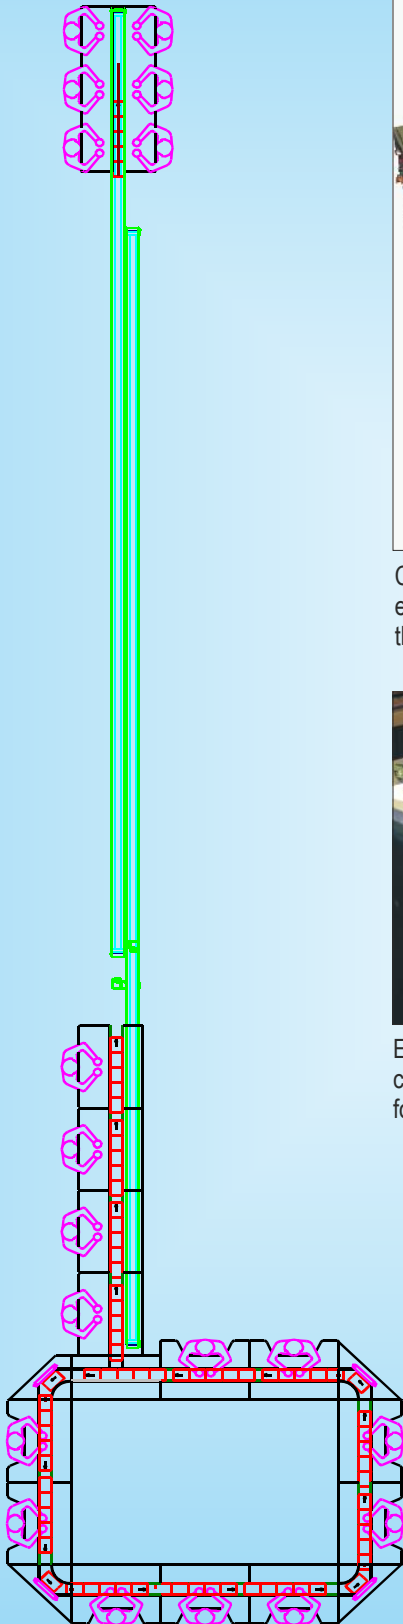

Constantly moving pallets with twin locations travel past nine operators as they assemble electronic components. The assemblies are then automatically transferred to the linear section of the line where the lids are loaded and then calibration and test are carried out.

Ergonomically designed workstation to give a comfortable and efficient working environment for operators.

Nylacast' pallets give a precision location and durability.

LINE LAYOUT

Pallets can be easily changed between batch runs. The system provides comfortable and efficient working conditions for operators, with well planned location and supply of components to minimise hand movement and maximise efficiency.

Corner modules allow pallets to turn through 90 degrees.
